

Climate Change Mitigation and Adaptation Risk Management

We can work closely to identify vulnerable areas and provide policy and roadmap to develop climate resilience strategy for your businesses

Strategies and Approaches

- Organization's capacity building for addressing the adaptation challenges
- Training on adaptation strategy development
- Develop systematic and your business specific system to help your key staff understanding the latest global and regional policies and programs
- Lead and train your staff to do various assessment for your business to address the climate change risks
- Develop strategy for transition to low carbon technology for your operations
- Offsetting emissions by investing in renewable energy production and use

Why Choose Us

- Our experts and systematic approach will effectively address climate risk management to your business model
- We will help identify the most appropriate and cost-effective risk management approaches for your organization
- We will institute the operational and governance steps to keep pace or ideally get ahead of your company's ongoing climate risks.

Prediction, Forecasting, and Modeling

Identifying and predicting risks from climate change to your business

Mitigation

Reducing greenhouse gas emissions from scope 1, 2 & 3 emissions, environmental impacts and their consequences to businesses

Adaptation

Strategies and tactics to improve an organization operation and/or its value chain's capacity to cope with the changes in climate

Our Services Include

- Climate Change vulnerability analysis
 - Climate Change adaptation strategy development
 - Climate Change mitigation assessment and road map preparation
 - Net zero transformation objectives, goal and planning for your organization
 - Carbon footprint and greenhouse gas (GHG) emissions quantification for scope 1, 2 & 3 emissions and emission intensity analysis
 - Climate change risks management system development and training
 - Development of strategy for implementation of IFRS S2 Climate-related Disclosures standard
 - Energy solutions and strategy development for energy efficiency
-

How We Can Help

- Shape your corporate policy to address sustainability and climate change related risks
- Establish the targets and metrics of sustainability and performance resilience of climate change. Targets and metrics deal with how the company measures the sustainability effort and whether there is a specific target that needs to be fulfilled by the company
- Work with your core team to measure the effectiveness of the sustainability efforts, and provide means and measures to define targets and metrics quantitatively
- Embedding climate change policy and objectives to your corporate policy
- Energy-related Sustainable Development Goals (SDGs)
- Achieve sustainability excellence by improving energy efficiency, technology improvements, increasing fossil gas (cogeneration), renewable power production, fuel switching, distribution and blending optimization, renewable fuels usage, refinery coprocessing, carbon capture and storage (CCS), development of low-carbon hydrogen capacities and production of sustainable biofuels through collaboration with other entities
- We can help to develop and integrate system that addresses the risks and opportunities an organization or institution may exposed to due to the regulatory and business risks due to climate change
