

Providing ESG and Sustainability Solutions to Help Businesses Grow

On June 26, 2023, the International Sustainability Standards Board (ISSB) released its first two IFRS Sustainability Disclosure Standards. IFRS S1 General Requirements for Disclosure of Sustainability-related Financial Information lays out the general requirements for disclosing sustainability-related financial information. IFRS S2 Climate-related Disclosures focuses on climate-related disclosures.

Who We Are

New **sustainability reporting standards** are taking shape in the world. The International Sustainability Standards Board (ISSB), under the IFRS Foundation, established a global baseline for sustainability reporting. These standards (IFRS S1 and IFRS S2) aim to promote more uniform and comparable sustainability disclosures for investors and other users of companies' sustainability reporting.

We can work closely to **identify gaps** and provide **policy and roadmap** to develop **climate resilience strategy** for your business in following ways:

- Organization's capacity building for addressing the sustainability challenges
- Helping organization to identify sustainability-related risks and opportunities
- Training on reporting requirement
- Develop systematic and your business specific system to help your key staff understanding the latest global and regional policies and programs
- Selection of standard, strategy development and metrics for reporting
- Develop your sustainability report as per the selected standard

Our experts and systematic approach will effectively address reporting readiness to your business model, identify the most appropriate and cost-effective ways and approaches for your organization, then institute the operational and governance steps to keep pace or ideally get ahead of your company's ongoing reporting.

Our Services

Reporting readiness

- evaluation against Corporate Sustainability Reporting Directive (CSRD), International Sustainability Standards Board (ISSB) disclosure requirement, Task Force on Climate-Related Financial Disclosures (TCFD)

Materiality assessment

- sustainability goals, targets, KPIs, and reporting objectives

Sustainability assessments

- conduct sustainability assessments and document impacts

ESG metric development

- developing ESG metric that aligns your reporting with IFRS standards

Preparation for next Reporting

- identification of the reporting gaps, designing the processes needed to obtain the required information for disclosure.

Why Choose Us

- We provide a complete systematic approach to your business to act responsibly and sustainably by sustainability-related risks and opportunities and setting goals and targets based upon your business specific needs by conducting integrated risk assessment process with your internal management team
- We can help to shape your corporate policy to address sustainability and climate change related risks
- Developing understanding of ESG, Sustainability and Climate Change on overall corporate policy and enterprise risk management strategies
- We can help to establish the targets and metrics of sustainability and performance resilience of climate change. Targets and metrics deal with how the company measures the sustainability effort and whether there is a specific target that needs to be fulfilled by the company
- Our team will closely work with your core team to measure the effectiveness of the sustainability efforts, and provide means and measures to define targets and metrics quantitatively
- Our team will help embedding sustainability reporting and climate change policy and objectives to your corporate policy
- We will help to identify and evaluate the energy-related Sustainable Development Goals (SDGs) for your business
- Achieve sustainability excellence by improving energy efficiency, technology improvements, increasing fossil gas (cogeneration), renewable power production, fuel switching, distribution and blending optimization, renewable fuels usage, refinery coprocessing, carbon capture and storage (CCS)
- We can help to develop and integrate system that addresses the risks and opportunities for your organization or institution due to the regulatory and financial business risks due to ESG and Sustainability reporting and its global and regional impacts

Deep Industry Experience

Our team has expertise working in upstream and downstream Oil & Gas sector, Manufacturing industry and Financial sector

Consulting Expertise

We have over 15 years of consulting experiences, Asia Pacific, America and North America regions.

Rapid Value Creation

We are committed to providing innovative solutions that will help create a better tomorrow for everyone.
